

Updates for our campus-wide Disinfection and Sanitization by FMD

- Disposable disinfectant wipe stations are being made available at central locations in campus buildings so that commonly used hard surfaces and objects (ie: desktops, classroom chairs, doorknobs, etc.) can be wiped throughout the day by our campus community members – staff, faculty students, visitors. This allows us all to keep our immediate environment cleaner and safer between custodial routine cleaning schedules.
- FMD will provide a botanical disinfectant solution (Bioesque) in the disinfectant wipe stations. This product is EPA and CDC approved for virus and bacteria, including Sars-CoV2, it is non-toxic and biodegradable, and does NOT require personal protective equipment for use.
- We have now received our designated shipment of hand sanitizers for campus. In the coming weeks, we will install a number of hand sanitizer dispensers in addition to the disinfectant wipe stations. Please continue to check our website at workrequest.fmd.uga.edu for more information or to request COVID-19 resources and/or supplies for your department.
